Franchise Online Agreement Portal – Business Requirements

Nov 3, 2026 · @Lincy

1. Purpose and Scope

The Franchise Online Agreement Portal is a web application where franchise partners register online, accept the franchise agreement, and are approved by two internal teams before an official agreement PDF is issued.

The portal will:

- Collect franchise, firm and contact-person details together with supporting documents.
- Show the current franchise agreement and require acceptance before registration.
- Verify the applicant's email address and mobile number.
- Route each application through Accounts approval, then Manager approval.
- Let applicants correct and resubmit rejected applications.
- Generate the agreement PDF automatically after final approval, available only to Admin and Manager.
- Keep registration data, documents, approval history and agreement versions secure.

There are four roles, each with its own dashboard and permissions: Admin, Accounts, Manager and Franchise User.

2. Users and Roles

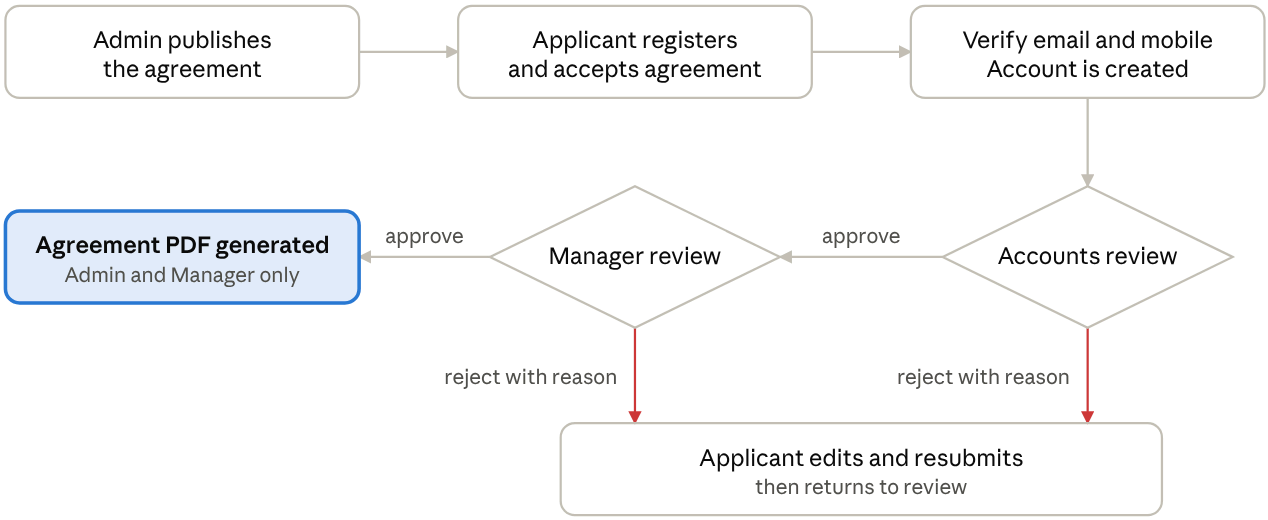

Four roles use the portal, and only Admin can create the internal roles (Accounts and Manager). Public registration can never produce an Admin, Accounts or Manager user.

Role	Purpose	What they can do	Restrictions
Admin	Full control of the portal	View all registrations and documents; create and manage Accounts and Manager users; create, preview and publish agreement content; monitor approvals and rejections; view and download agreement PDFs	Cannot be created through public registration
Accounts	First-level approver	View new registrations, firm and contact details, and uploaded documents; approve, or reject with a mandatory reason; view previously reviewed applications	No access to agreement PDFs; account created by Admin only
Manager	Second-level approver	View applications approved by Accounts, with documents; approve, or reject with a mandatory reason; view and download agreement PDFs	Sees only Accounts-approved applications; account created by Admin only
Franchise User	Applicant	Register publicly; verify email and mobile; track status; read rejection reasons; edit and resubmit rejected applications; view agreement acceptance details	Cannot view or download the agreement PDF; sees only their own registration

3. How the Process Works

An application moves from Admin publishing the agreement, through applicant registration and verification, to Accounts and Manager review.

Two approvals stand between registration and the agreement PDF

approval flow · 6 steps, 2 decisions

A rejection at either stage goes back to the applicant with a reason, and only Admin and Manager can open the final PDF.

4. Franchise Registration

Applicants complete one registration form with three parts: franchise details, official documents and one or more contact persons.

4.1 Franchise details

Field	Input	Required
Franchise Model	Text	Yes
Firm Type	Dropdown	Yes
Firm Name	Text	Yes

Firm Type options: Sole Proprietorship, Partnership Firm, Limited Liability Partnership, One Person Company, Private Limited Company.

4.2 Official documents

Field	Input	Required
Official PAN Number	Text	Yes
Official PAN Image	File upload	Yes
GST Number	Text	No
GST Certificate	File upload	No
Rental Agreement	File upload	No

The portal checks PAN and GST formats where applicable and stores uploaded documents securely.

4.3 Contact persons

Each contact person has the following details.

Field	Input	Required
Name	Text	Yes
Mobile Number	Number	Yes
Email ID	Email	Yes
ID Proof	File upload	Yes
Photograph	Image upload	Yes

- The first contact-person section is shown by default.
- An **Add New** button (top-right or bottom-right of the section) adds another identical section. Any number of contacts can be added.
- Added sections have a **Remove** option.
- Each contact's details and documents are stored separately and linked to the franchise registration.
- The first contact is the primary contact for account verification unless configured otherwise.

5. Agreement Management and Acceptance

Admin controls the agreement text, and every applicant must read and accept it before registering.

5.1 Admin: managing agreement content

- Add new agreement content and edit existing content.
- Preview content before publishing.
- Publish content, manage versions, and activate or deactivate a version.
- The published agreement appears automatically on the registration page.

5.2 Applicant: reading and accepting

- The agreement is shown after the personal, firm and contact-person details, and the applicant can read all of it.
- A mandatory checkbox reads: "I have read and agree to all the terms and conditions mentioned in this franchise agreement."
- The Register button cannot be used until the box is ticked.

5.3 What the portal records

- The agreement version accepted, plus the date and time of acceptance.
- A link between the acceptance, the Franchise User and the registration.
- If Admin later publishes a new version, existing registrations keep the version they originally accepted.

6. Verification, Account Creation and Login

An applicant's account exists only after both email and mobile are verified, and every role signs in through the same secure login.

6.1 Verification after clicking Register

1. **Email:** the portal sends a verification link or OTP to the registered email. Registration cannot complete until this succeeds.
2. **Mobile:** the portal sends an SMS OTP to the primary mobile number. The OTP expires after a set time, and the user can request a new one.

Both verifications are mandatory.

6.2 Account creation

After successful verification the portal:

- Creates the Franchise User account and lets the user set a password.
- Saves all registration details and links them to the user's account.
- Sets the status to **Pending Accounts** and shows the application in the Accounts dashboard.
- Blocks duplicate accounts and duplicate registrations.

6.3 Login

Role	Signs in with
Franchise User	Registered email or verified mobile number, plus password
Admin, Accounts, Manager	Authorised email or username, plus password. Accounts are created by Admin only

6.4 Login security

- The user's role is read from the database, and the user is sent to the matching dashboard.
- Public users cannot choose or gain a privileged role.
- A Forgot Password option is available.
- Permissions are enforced on the server, not only by hiding menu items.

7. Dashboards

Each role lands on its own dashboard after login and sees only what that role needs.

7.1 Admin

Summary cards: Total Franchise Registrations, Pending Accounts Approval, Pending Manager Approval, Approved Registrations, Rejected Registrations, Total Accounts Users, Total Manager Users, Generated Agreement PDFs.

Menu: Dashboard, Franchise Registrations, Agreement Content Management, Accounts User Management, Manager User Management, Approval Tracking, Rejected Applications, Approved Applications, Generated Agreement PDFs, Settings, Logout.

7.2 Accounts

- Pending, Approved and Rejected Registrations
- Registration Details and Uploaded Documents
- Search and Filters

7.3 Manager

- Pending Approvals, Approved Registrations and Rejected Registrations
- Registration Details and Uploaded Documents
- Generated Agreements

7.4 Franchise User

- My Registration and My Profile
- Registration Status and Approval Status
- Rejection Reason (shown if rejected)
- Agreement Acceptance Information
- Logout

Users can view their earlier submission at any time without registering again.

8. Approval Workflow and Statuses

Every application passes Accounts first and Manager second; a rejection at either stage returns it to the applicant with a reason.

8.1 Accounts review (first level)

Action	What happens
Approve	Status becomes Accounts Approved; reviewer ID and date/time are recorded; the application moves to the Manager automatically

Action	What happens
Reject	A reason is mandatory and is saved; status becomes Rejected by Accounts; the applicant is notified and can edit and resubmit

8.2 Manager review (second level)

Only Accounts-approved applications appear for the Manager.

Action	What happens
Approve	Status becomes Approved; Manager ID and date/time are recorded; the agreement PDF is generated automatically and saved securely
Reject	A reason is mandatory and is saved; status becomes Rejected by Manager; the applicant is notified and can edit and resubmit

8.3 Statuses

Status	Meaning
Draft	Registration not yet submitted
Pending Verification	Email or mobile verification incomplete
Pending Accounts	Submitted and verified; waiting for Accounts
Rejected by Accounts	Accounts rejected the application
Accounts Approved	Approved by Accounts
Pending Manager	Waiting for Manager review
Rejected by Manager	Manager rejected the application
Approved	Final approval completed

The portal updates statuses automatically as the workflow progresses.

8.4 What the applicant can do at each status

Status	Permission
Draft	Edit
Pending Accounts	View only
Rejected by Accounts	Edit and resubmit
Pending Manager	View only
Rejected by Manager	Edit and resubmit
Approved	View only

A resubmitted application returns to the approval stage that rejected it, as the original requirement states for Accounts rejections. The original text does not say explicitly where a Manager-rejected application re-enters, so this should be confirmed. The portal keeps all earlier rejection reasons and approval history.

9. Agreement PDF

When the Manager approves an application, the portal generates the agreement PDF automatically, and only Admin and Manager can open it.

9.1 Contents

The PDF is professionally formatted, suitable for printing, and includes:

1. Agreement title and a unique agreement reference number
2. Franchise firm details, franchise model and firm type
3. Official PAN details, and GST details if provided
4. Contact-person details
5. The approved agreement content
6. Manager approval date and agreement generation date

9.2 Who can access it

Role	Access
Admin	View and download
Manager	View and download
Accounts	None
Franchise User	None

Access is restricted by server-side authorisation and secure file storage; hiding the download button alone is not enough.

9.3 Mandatory footer

Every page carries this centred, readable statement at the bottom:

> This is a computer-generated digital agreement and doesn't need any digital signature.

- Added automatically during generation and kept when the PDF is downloaded or printed.
- No manual or digital signature field is required.

10. Notifications

The portal notifies applicants and Admin at each important workflow event.

Recipient	Events
Franchise User	Registration submitted; email verification required; mobile verification required; Accounts approved; Accounts rejected; Manager rejected; final approval completed
Admin	New franchise registration; Accounts approval completed; Manager approval completed; application rejected; agreement PDF generated

Rejection notifications include the reason and instructions for resubmitting.

11. Data and Security

The portal keeps a complete, protected record of every registration, and each person can reach only the data their role allows.

11.1 Information the portal stores

Record	What it holds
User accounts	Logins and role for every user
Franchise registrations	Main franchise and firm details, linked to the applicant's account
Contact persons	Each contact's details, linked to the registration
Documents	References to uploaded PAN, GST, rental, ID proof and photographs
Agreements	Agreement content and versions
Agreement acceptances	Which version each applicant accepted, and when
Approval history	Reviewer ID, decision, reason and timestamp for every Accounts and Manager decision
Generated agreements	Records of the generated PDFs
Notifications	Messages sent to users and Admin

When a rejected application is edited and resubmitted, earlier versions and decisions are kept as history.

11.2 Security requirements

- Secure authentication and role-based access control.
- Franchise Users can access only their own registration.
- Accounts can access applications at the Accounts review stage; Manager can access Accounts-approved applications.
- Only Admin and Manager can access generated agreement PDFs.

- Private documents are held in secure storage with role-based access.
- Uploaded files are validated, with restricted file types and sizes.
- PAN, GST and identity information is protected.
- All approval actions are validated on the server, and status cannot be changed without authorisation.
- Important actions are written to an audit log.

12. Technology, Delivery and Testing

The recommended stack is React with Supabase, and the build is complete only when every checklist item below passes.

12.1 Recommended technology

Area	Recommendation
Frontend	React, TypeScript, Vite, Tailwind CSS
Backend and database	Supabase: PostgreSQL, Authentication, Storage, Row Level Security
PDF generation	A suitable PDF library, run automatically after Manager approval
Notifications	An email service for verification and workflow messages; an SMS gateway for mobile OTP

12.2 Delivery expectations

- Inspect the existing project first and reuse existing components; do not rebuild the whole application.
- Never delete or reset existing database data; use migrations for schema changes.
- Build frontend and backend together, with real authentication, verification and authorisation.
- No mock data in the final product.
- Responsive on desktop, tablet and mobile.

12.3 Acceptance checklist

- [ ] Full registration and approval workflow works end to end.
- [ ] All four roles tested independently.
- [ ] Every button and form works.
- [ ] PDF is generated automatically, with the footer on every page.
- [ ] PDF download works for Admin and Manager and is blocked for Accounts and Franchise Users.
- [ ] Rejection, editing and resubmission work at both approval stages.
- [ ] Layout works on desktop, tablet and mobile.
